

TA CHEN STAINLESS PIPE CO., LTD.

Biodiversity and No Deforestation Policy

Ta Chen Stainless Pipe fully recognizes the significance and value of biodiversity conservation and forest resource protection. Adhering to the principles of sustainable operation and harmonious coexistence with nature, this policy has been approved by the Chairman as the highest supervisory body.

Ta Chen is committed:

1. To achieve a net positive impact (NPI) and no net loss (NNL) by 2050 as our targets, maintain biodiversity and avoid ecological loss during operation.
2. Avoid selecting operations and facilities in areas identified as internationally or nationally significant for biodiversity within our own operations and value chain.
3. When our operating locations are near critical biodiversity areas, we will conduct biodiversity risk assessments to identify priority areas and apply a mitigation hierarchy approach (avoid, minimize, restore & offset), to reduce biodiversity impacts and strive for no net loss.
4. Adhere to international and local forest laws and regulations, aiming for zero net deforestation to conserve forests and promote sustainable forest management.
5. Engage with suppliers, stakeholders, and partners to support and commit to biodiversity and forest conservation.

Li Yun Hsieh
